

a database including data representative of programmable electrical components comprising the motor control center, a function of the components in the motor control center, and a physical location of the components in the motor control center;

a sales proposal module for facilitating generation of a sales proposal based upon the database; and

a component programming module adapted to access data from the database and to download the data into each programmable component.

Please add the following new claims:

34. (New) A method for selling engineered electrical systems, the method comprising the steps of:

generating a database for an electrical system comprising a plurality of programmable devices, the database including device designation data, the device designation data including data representative of a physical location of a device in the system;

soliciting an order for the system;

assembling the system including the plurality of programmable devices; and
configuring memory objects within the devices based upon the database.

35. (New) The method of claim 34, wherein the device designation data includes data representative of a function of a device in the system.

36. (New) The method of claim 34, wherein the step of soliciting the order includes computing price data based upon the database.

37. (New) The method of claim 34, comprising the further step of storing the database in a computer coupled to the system.

38. (New) The method of claim 34, wherein the system includes a plurality of subassemblies, at least a portion of the subassemblies including at least one programmable device, and wherein the memory objects of the programmable devices are configured after arrangement of the devices in the subassemblies.

39. (New) The method of claim 38, wherein the memory objects of the programmable devices are configured prior to arrangement of the subassemblies in the system.

a 3
40. (New) The method of claim 38, wherein the memory objects of the programmable devices are configured after arrangement of the subassemblies in the system.

41. (New) The method of claim 38, comprising the further step of designing the electrical system including the plurality of programmable devices.

42. (New) A method for coordinating sales and manufacturing of electrical systems, the method comprising the steps of:

generating a system design database including data representative of programmable components and component layout for an electrical system, the programmable components being programmed by downloading a portion of the database into each programmable component;

soliciting a sale of the system based upon the system design;

assembling the system components in accordance with the component layout; and

programming the programmable components based upon the database.

43. (New) The method of claim 42, wherein the portion of the database includes data representative of a physical location of each programmable component in the system in accordance with the layout.
